SCIENCE AND ECO

TERM I NEWS LETTER (Classes I, II & III)

OCTOBER

Science and Eco club was basically introduced to focus on actions - and embedding transformative thinking into everyday life and communities. We ensure our children to have the power to be the change for sustainability that our world needs by engaging them in fun, action-orientated and socially responsible learning.

Science and Eco club during the first half of the year was well received by the students.

We teachers have been rendering our help to the students to get hands on with science in the most imaginative and stimulating ways possible.

The Needs of a Plant

Students (classes I,II and III) of Eco club were taken to a nature walk as to make them feel how beautiful the world around them is with these little green creatures..They come to know that these green ones are the lungs of the planet earth..

The next week pupils were explained about the sowing of seeds and how to take care of saplings..also an activity of collage work with waste papers was done ...

As a part of club activity class I,II and III children were taught about the importance of plants and told them to bring saplings and they planted them in the month of July 2016. Children participated with great enthusiasm and vigour.

As a part of this club children were also told how to take care of the nature and how to preserve the environment.
