

BUTTER FLY GARDEN 06th August 2016

The trip to butterfly garden was made in order to collect pollen grains from different flowers as a biological lab experiment and sow small saplings as a part of the *haritha haram* movement started by Telangana Chief minister Kalvakuntla Chandra Shekar Rao. Not only was it a biological trip but also a part of the school's environment protection program. The garden was filled with green lush plants and colourful butterflies flying around. This 9 acre garden filled with about 100 species of plants is sure to attract not only environmentalists but also common people wishing to get a break from their monotonous lives.
