

PRE-PRIMARY SCIENCE FAIR

"Science is not just a subject; it's a way of thinking. Seeing these children explain their projects with such joy show that the future of innovation is in safe hands."

On February 20, 2026, the corridors of P. Obul Reddy Public School buzzed with the inquisitive energy of the youngest scientists from classes of LKG and UKG. The Pre-Primary Science Fair was officially inaugurated with a traditional ribbon-cutting ceremony by the School Principal, Ms. K. Vinitha.

The event was attended by all School Heads, including the Pre-Primary Headmistress, Ms. Vijaya Durga, who joined the students to encourage their very first steps into the world of scientific inquiry. During their visit, the Principal and Headmistress interacted closely with the students. Each child confidently narrated the logic behind their project, showcasing their developing confidence and communication skills.

The little ones turned into mini-researchers as they displayed an array of creative science projects. From the mechanics of a volcano to the wonders of plant life cycles, mixing of colours these exhibits makes the fair a memorable educational experience.

The event concluded with words of appreciation from Ms. Vijaya Durga, who thanked the parents and teachers for their support in making the fair a resounding success. The fair emphasized experiential and play-based learning. It was a day proving that tiny tots are never too young to start questioning the world around them.
