

S.CHAND'S CONTINUES PROFESSIONAL DEVELOPMENT WEBINARS

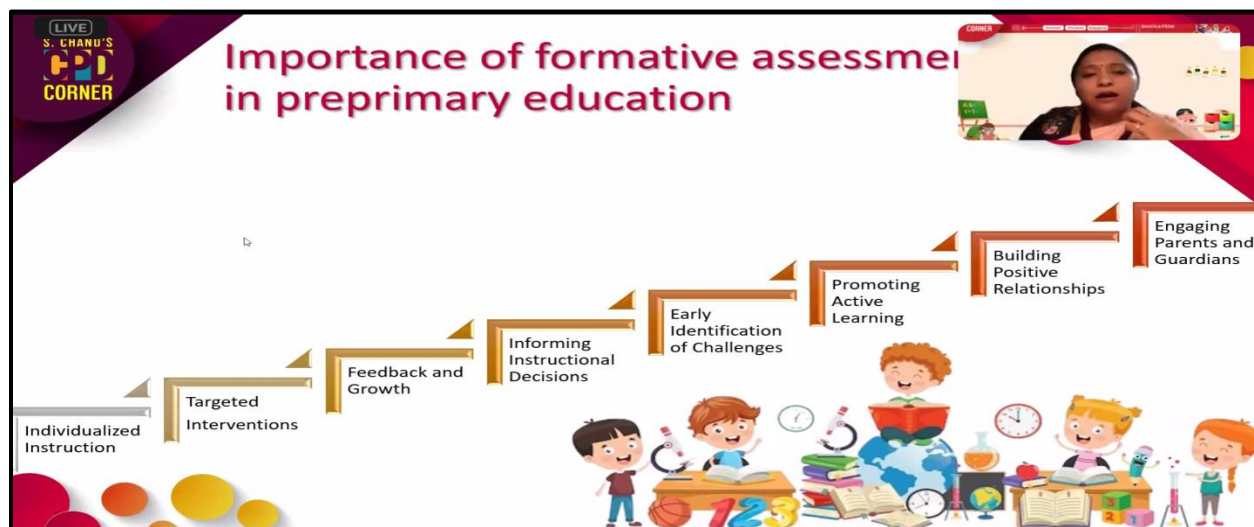

S.No	Date	Topic	Resource Person	Timings	Attended by
1	21-07-23	Documenting and Communicating Assessments in FLN	Ms. Raja Rajeswari	4:00PM - 5:15PM	Pre Primary Teachers
2	22-07-23	The Power of Manipulatives in Foundational Literacy and Numeracy (FLN)			
3	28-07-23	Enabling Language and Literacy Development in the Early Years			
4	29-07-23	Make Your Students Competent in Foundational Numeracy			

1. Documenting and Communicating Assessments in FLN : The assessment is to support the children's holistic learning. In the context of Foundational Literacy and Numeracy (FLN), the first and most important purpose is to use assessments to provide teachers working at the foundational stage with concrete feedback about the children's learning levels in literacy and numeracy.

Key Takeaways:

Through this module, all participants will be able to:

- Adopt strategies for ongoing assessment during a term
- develop a Holistic Progress Card to monitor the learner's overall development

2. The Power of Manipulatives in Foundational Literacy and Numeracy (FLN): Toys and manipulatives help children in visualising of concepts. These should be used as important resources for teaching foundational literacy and numeracy skills.

Key Takeaways:

Through this session, all participants will be able to:

- Classify the materials that can be prepared by teachers and learners and those that can be outsourced based on the requirement of the classroom execution
- Find and select the suitable manipulative for adequate quality of teaching and learning
- Explore the practical usage of technology, digital and audio-visual materials to support the meaningful learning experience

3. **Enabling Language and Literacy Development in the Early Years:** Language and literacy are major domains of early childhood development. Language development involves the development of the skills used to communicate with others through languages, while literacy development involves the ability to read and write.

Key Takeaways:

Through this session, all participants will be able to:

- Explore the strategies to enable effective language and literacy development in the early years
- Develop structured activities that promote oral language development, decoding(sounds and symbol relationship), reading fluency, reading comprehension and writing skills

4. **Make Your Students Competent in Foundational Numeracy:** Foundational numeracy skills are essential for success in mathematics and in many real-life situations. Here are some strategies to help make students competent in foundational numeracy: Start early: Introduce basic numeracy concepts, such as counting and number recognition, as early as possible. Make it hands-on: Use manipulatives, such as blocks, counters, and number line, to help students understand and explore mathematical concepts. Use real-life examples: Connect mathematical concepts to real-life situations, such as cooking, shopping, and measuring, to help students understand the relevance of what they are learning. Encourage active engagement: Encourage students to engage in mathematical discussions and activities and provide opportunities for them to explore and make sense of mathematical concepts on their own. Provide ongoing practice: Regular and consistent practice is key to developing and reinforcing numeracy skills. Offer a variety of activities and assessments that provide opportunities for students to practice and apply what they have learned. Use technology: Incorporate technology, such as educational apps and online games, to engage students and provide additional opportunities for practice. Foster a growth mindset: Encourage a growth mindset by helping students understand that mathematical understanding is developed over time and that mistakes are opportunities to learn and grow. It is important to keep in mind that each student has their own pace and style of learning. By using a variety of teaching strategies and creating a supportive learning environment, teachers can help students develop a strong foundation in numeracy and a love of mathematics.

Key Takeaways:

Through this module, all teacher participants will be able to:

- Explore strategies to achieve mathematical skills through structured instructions/activities
- Develop structured activities that create awareness of number sense, number operations, understanding shapes, spatial relationships, measurement, and data handling.
