

Eco walks are a delightful way to know more about amazing plants. Students were taken around the school to get to know the various plants present in the school campus. This activity helped them to know the different types of plants, their common and scientific names.

Students were made to understand about the Eco- system and the role it plays in maintaining the balance in nature through PowerPoint presentation. Students were asked to show the concept pictorially.

Students were educated about re-use of waste materials and preparation of products made out of waste. They were taught to make envelopes, paper bags, collage with old newspapers and other products with waste.

Eco club

CLASSES 4 & 5

"Do your part in saving the planet"

Students were introduced to Eco club and pep talk was given regarding Environment, the purpose of the club, to create awareness of environmental issues and how to conserve it.

Students were made aware of the role played by plants in keeping the surrounding clean and green. They were also motivated to minimize the use of plastic. So they re-used the plastic bottles for planting the saplings in the school premises.

Students participated with great enthusiasm and they gained a variety of experiences and acquired a basic understanding of the environment and its associated problems. We will come up with many more interesting activities to save the environment in the future.
