

## **DDMS P Obul Reddy Public School**

### **News Letter (Science and Eco Club)**

#### **Term I – (Class I, II & III)- 2019 – 2020**

Science and Eco club plays an important role in creating environmental awareness among the future generation.

It is a platform where children get knowledge about environment. It also enables the students to be sensitive towards environmental concern to tackle environmental problems.

The children actively participated in the following activities during the term I. The children learned the importance of plants and nature through demonstrations and they learned some songs on nature. To mention a few some of the activities are as follows.

Nature walk around the School Garden. Children had a walk-through different type of trees and plants and also learned how to create a clean and green consciousness.

Children playing in the sand play area.

This helps the children to be close to the nature.

Children learning the importance of Neem and Tulsi plants and their medicinal values.

Clay Ganesha making

Flag made with pulses

Rakhi celebration

Eco friendly Rakhi

This club has a great vision ahead as it is a “SCIENCE AND ECO CLUB” and its prime focus is on to keep the children aware of the nature and its uses.

In the forthcoming term we would like to motivate students on how to imbibe habits and lifestyle for minimum waste generation.

We would also want to sensitize the children to minimize use of plastic bags and to promote ethos of conservation of water by minimizing the use of water.
