

REPORT ON THE EDUCATIONAL FIELD TRIP TO BOTANICAL GARDEN, KONDAPURBY GRADE 4 AND 5

“Do not just tell your children about the world. Show them.”

Teaching children about the natural world is seen as one of the most important events in their lives. Children of classes 4 & 5 were taken to the botanical garden on 22 December 2023. Firstly, they were taken to

the herbal garden where different types of herbal plants were shown. They learned the medicinal values of those plants with their scientific names. The Cactus garden also had a variety of cactuses. They observed that the cactus was grown in green house as it required to be grown in hotter place.

After exploring

the faunas, students witnessed the snake show. Many venomous and non-venomous snakes like Common sand Boa, Bronze black tree snake, Banded racer, Rustles viper etc., were shown and the details of these snakes (like their types),such as terrestrial, aquatic and arboreal were explained. Children enthusiastically participated in the discussions. Myths related with snakes were also brought into

the discussions in an interesting way to give the clarity on these misbelieves.

After the lunch they were taken for an interesting audio-visual show. In the AV room video of botanical garden and VR indoor and outdoor safari were shown.
