

## Math Week

To commemorate the birthday of the Indian born Mathematician on 23 December and the National Mathematics Day, the school dedicated the week from 19 December to 24 December 2022 to math related activities. Competitions and special assemblies were organised to enhance the learning of math.

All the classes, right from primary to senior secondary were involved in various activities that highlighted the importance of mathematics in our daily lives. Students also made models of mathematical concepts like square root spiral, magic square, quadratic running race etc., and displayed them. Special assemblies were also conducted which included a brief history of the mathematician, some amazing mathematical facts, short cuts in calculations, logical reasoning of concepts, quiz and many more such activities. What is more -students even made decorative door curtains of shapes like triangle, rectangle, pyramid etc. with paper.

The week long activities saw the students beaming with excitement while those few who detested the subject seemed to be developing an interest in it. The math department of the school left no stone unturned to the avenues of the subject that not only drew curiosity but also made it easy and interesting for the learners.
