

EARTH DAY CELEBRATIONS – PRIMARY WING

The Primary Wing of AMS P. Obul Reddy Public School celebrated Earth Day on 22 April 2026 with great enthusiasm, inspiring students to develop a deeper appreciation for nature and a stronger sense of environmental responsibility. The programme was designed to encourage young learners to understand the importance of protecting the planet and adopting sustainable practices in their daily lives.

Observed worldwide every year on 22 April, Earth Day serves as a reminder of our collective responsibility towards environmental conservation. Since its inception in 1970, the movement has grown into a global campaign that motivates individuals and communities to take meaningful action for a cleaner, greener, and healthier world.

The theme for Earth Day 2026, “Our Power, Our Planet,” highlighted the strength of collective effort in addressing environmental challenges and creating a sustainable future. The theme encouraged students to recognize that even small actions can contribute significantly to the well-being of the Earth.

To mark the occasion, students enthusiastically participated in a variety of engaging activities. A special CCA competition on environmental conservation provided a platform for them to showcase their creativity and awareness. The beautifully designed Pledge Tree reflected their commitment to protecting the environment through thoughtful promises and eco-friendly practices. Students also expressed their concern for the planet through colourful posters, while speeches and songs conveyed powerful messages on conservation, sustainability, and responsible citizenship.

The celebration offered valuable opportunities for students to reflect on their role in preserving natural resources and safeguarding the environment. It concluded with a collective pledge to care for Mother Earth through conscious and sustainable actions. The event successfully nurtured environmental awareness among young learners and reinforced the importance of working together to build a greener and more sustainable future for generations to come.
